# PROJECT OVERVIEW

- Resume Maker is a software developed in python which is used to create resume from valid inputs inside the python terminal.
- The Program outputs the resume as a pdf as it will be helpful for students.
- The program takes various inputs from the user like name, work experience, education details and many more.
- Then it prints out all details in a structured manner to make a good resume.

# WHY DO WE NEED IT ?

1

## Easy to use

This software is designed in a such a way that it can be used very easily, even by school students.

2

## Faster

It produces the resume in fraction of seconds after we input the data.

3

## Productive

This resume can be used by students, employees as it contains different sections for all purposes.

4

## Colorful

The output resume is in the perfect format and good looking which is accepted by many companies.

# HOW DOES IT WORK ?

- This project uses the fpdf library to output objects on pdf.
- It also uses the color library from turtle for outputting different colors on the pdf.
- All inputs are taken inside the project using different statements.
- Then different functions inside the fpdf library are used to output different set of data on the pdf.
  - FPDF() - to create a pdf.
  - pdf.image() - to print an image on the pdf.
  - pdf.cell() - to create a cell on the pdf.
  - pdf.set\_text\_color() - to set the text color
  - pdf.set\_font() - to set the font of the text
  - pdf.set\_x() and pdf.set\_y() - to set the x and y co-ordinates.
  - pdf.multi\_cell() - to output multiple cells on pdf
